SUBJECT: Commodore Semiconductor Group
Quarterly Groundwater Sampling
Norristown, Montgomery County

TO: CSG Site File
Norristown Region
Hazardous Sites Cleanup Program

FROM: Jay Newbaker *J.N.*
Hydrogeologist
Norristown Region
Hazardous Sites Cleanup Program

On November 14, 1989, a meeting was held between representatives of Commodore Semiconductor, Roy F. Weston, and PADER for the purpose of evaluating the quarterly groundwater monitoring program associated with the CSG Superfund site. Specifically, Commodore requested that they be allowed to eliminate the next two rounds of quarterly sampling (Nov., 1989, and Feb., 1990) in order to reduce costs and to avoid duplication of the comprehensive groundwater sampling to take place during the forthcoming RI activities in May, 1990.

All parties agreed that it would not be necessary to perform quarterly sampling before the RI for those residential and monitoring wells that have been routinely sampled since September, 1984. It was agreed, however, to fill in data gaps that have existed in the residential well sampling data since the inception of the monitoring program. 21 residential wells have only been analyzed for TCE to date and were last sampled in Sept., 1984. Accordingly, an attempt will be made to sample the following wells during one round of sampling in Nov., 1989:

2608 AUD	2723 AUD	2769 AUD
2612 AUD	2731 AUD	2665 EGYPT
2625 AUD	2738 AUD	2669 EGYPT
2622 AUD	2741 AUD	2718 EGYPT
2637 AUD	2744 AUD	2720 EGYPT
2639 AUD	2750 AUD	2722 EGYPT
2719 AUD	2754 AUD	1169 THRUSH

AR300647

In addition 2705 AUD, 835 RH, and 839 RH will be sampled during the Nov., 1989 round since previous data indicates either filter breakthrough (835 RH & 839 RH) or lack of post-filter data (2705 AUD). This will bring the total number of wells to be sampled to 24.

No other wells will be sampled before the RI in May, 1990. The Feb., 1990 sampling round will be eliminated.
